CF:

当 $s_i^n \leq \delta + \tau v_f$ 时: $x_{i+1}^n = x_i^{n-1} - \delta$

已知 $s_i = x_i^{n-1} - x_i^n$

$$s_i = x_{i+1}^n - x_i^n + \delta = v_i^n \tau + \delta$$

$$\text{则 } \frac{1}{k} = \frac{q}{k} \tau + \delta; \text{ 即: } q = \frac{1}{\tau} - \frac{\delta k}{\tau}$$

KW: 同理如上

对于另半边:

CF:

$$x_{i+1}^n = x_i^n + \tau v_f$$

$$v = v_f$$

KW:

$$x_{i+1}^n = x_0^n + i \tau v_f + \tau v_f$$

$$v = v_f$$
